## WE REPAIR

- Mechanical seals made by ANGA
- Mechanical seals made by other manufacturers

We are able to modify seal materials, thus improving their durability and the effectiveness of their operation. The selection of materials concerns:

- elastomers (mainly O-rings),
- sliding rings

Mechanical seals test rigs

Dynamic balancing of a pump impeller

## COMPREHENSIVE SERVICE - SCOPE

- Assessing the level of seal parts wear, defining the scope of services, service pricing
- Cleaning seal components.  
All steel components are cleaned using:
  - ☐ ultrasonic cleaners,
  - ☐ small size sand blasting unit,
  - ☐ lathe.
- Grinding, lapping of sliding ring surfaces or replacing them with new ones
- Replacement of elastomers (O-rings), springs, screws, etc.
- Seal installation
- Carrying out static and dynamic tests with full test documentation
- Shipment to the customer or installation of equipment by ANGA's Mobile Service Team

## BENEFITS

- Comprehensive service – all services executed by ANGA
- Shorter service time compared to manufacturing a new seal
- Reduced operating costs of equipment with mechanical seals
- The possibility of improving the selection of material: elastomers and sliding rings
- Warranty for services provided
- Static and dynamic tests of seals
- At customer's request, repair documentation, including test reports, is provided
- ANGA's Mobile Service Team – on-site services available at customer's plant:
  - ☐ dismantling and installation of seals,
  - ☐ laser alignment of pump units,
  - ☐ analysis of the technical condition of rotating equipment (vibration analysis, thermo-visual analysis).
- Possibility of comprehensive pump repair or modification
- Dynamic balancing of parts up to 50 kg with accuracy up to G 0.4

The headquarters of the company ANGA

## WHEN IS REPAIR RECOMMENDED?

- When your operating equipment is fitted with:
  - ☐ component or compact (cartridge) mechanical seals, also gas-lubricated seals,
  - ☐ seals designed specifically for given equipment,
  - ☐ seals with sliding rings in which special manufacturing technologies have been applied.
- The cost of repair falls within the 30-65% margin of the cost of a brand new seal
