

Pump repairs

Using over 30 years of experience in the pump sector, its modern technical resources and a team of experienced specialists, ANGA offers its customers:

- repairs of impeller and displacement pumps (peripheral, worm, screw, plunger, lobar),
- pump repairs of the majority of known Polish and foreign manufacturers,
- repairs of pumps operating in difficult working conditions (submersible and deep-well pumps, for aggressive media, operating in high temperatures),
- adaptation of pumps from braided packing to mechanical seals.

Thanks to cooperation with ANGA, our customers receive a comprehensive service including:

- technical inspection of pumps,
- repair documentation, repair history, test reports available for the customer,
- dynamic testing of impeller pumps at a specialist station,
- replacement or regeneration of mechanical seals in pumps,
- replacement of various types of bearings,
- regeneration of electric motors,
- painting and cleaning of pumps and motors,
- dynamic [balancing](#) of pump impellers,
- [alignment](#) of pump units with laser devices.
